Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Customer Journey Map:

A customer journey map is a visual that shows the steps a person goes through to achieve a goal, and how they think and feel at each step. It helps the team see where the experience works well, where it breaks down, and where the product can be improved.

The map below follows a ServiceNow administrator importing bulk employee data from a spreadsheet using Import Sets and Transform Maps. It covers five stages (Prepare, Load, Transform, Verify, Improve) and, for each stage, the steps, interactions, goals, positive moments, negative moments and areas of opportunity.

Customer Journey Map: Import Data using Transform Maps

ServiceNow Employee Data Import

Persona: ServiceNow administrator importing employee data from a spreadsheet

	Prepare What does the admin do to get the data ready?	Load How is the data brought into ServiceNow?	Transform How is the data mapped to the target table?	Verify How does the admin check the result?	Improve What happens after the import is done?
Steps What does the admin do at each stage?	Receive employee spreadsheet Clean column headers	Create Data Source Load data into Import Set table	Create Transform Map Map fields, set coalesce	Run the transform Check Import Set rows	Fix errors and re-run Reuse map for next import
Interactions People, places and things at each stage	HR sends spreadsheet by email Excel file	Data Sources module Import Set table	Transform Map form Field maps	Transform History Employee table	HR team feedback Saved Transform Map
Goals & motivations What is the admin trying to achieve?	Get clean, consistent data	Bring data in quickly	Map every column correctly	Confirm all records imported	Make future imports easy
Positive moments When is the experience smooth or satisfying?	Sample file has clear columns	Upload works first time	Auto-map suggests fields	Records appear in the table	Map is reusable
Negative moments When is the experience frustrating or confusing?	Messy, inconsistent headers	Wrong file format errors	Duplicates without coalesce	Some rows fail to transform	Manual re-checks take time
Areas of opportunity How could the experience be improved?	Share a standard spreadsheet template	Validate the file before upload	Add an onBefore validation script	Automate an error report	Schedule recurring imports
