Project Design Phase-II
Data Flow Diagram & User Stories

Date	**28 September 2026**
Team ID	6ab221d587602313e82c60c9
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. It shows how data enters and leaves the system, what changes the information, and where data is stored. The DFD below shows how a spreadsheet is imported into ServiceNow using Import Sets and Transform Maps.

DFD Level 0 - Import Data using Transform Maps (Spreadsheet)

Flow:

1. Admin logs in to ServiceNow and creates a Data Source, uploading the spreadsheet (Excel / CSV).
2. Data is loaded into the Import Set staging table (D1).
3. The Transform Map maps fields, applies coalesce and scripts, and writes records to the target table (D2).
4. Admin verifies the imported records and reviews the transform history / error log.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	Spreadsheet Data Source Creation	USN-1	As an admin, I can create a Data Source and upload an Excel (.xlsx) file so that the data can be imported.	File is uploaded and attached to the Data Source record	High	Sprint-1
		USN-2	As an admin, I can upload a CSV file as a data source.	CSV file is accepted and parsed correctly	Medium	Sprint-1
	Import Set Loading	USN-3	As an admin, I can load the spreadsheet data into an Import Set staging table.	All spreadsheet rows appear in the staging table	High	Sprint-1
		USN-4	As an admin, I can preview the loaded rows before running the transformation.	I can view row count and values in the Import Set	Medium	Sprint-2
Data Manager	Transform Map Configuration	USN-5	As a data manager, I can create a Transform Map from the staging table to the target table.	Transform Map is saved with correct source and target tables	High	Sprint-2
		USN-6	As a data manager, I can map source fields to target fields.	Each spreadsheet column maps to the correct target field	High	Sprint-2
		USN-7	As a data manager, I can set a coalesce field so duplicate records are not created.	Existing records are updated instead of duplicated	Medium	Sprint-2
	Data Transformation & Import	USN-8	As a data manager, I can run the Transform Map to insert / update records in the target table.	Records are created / updated in the target table	High	Sprint-3
		USN-9	As a data manager, I can use a transform script to clean data (trim, format).	Imported data is clean and correctly formatted	Low	Sprint-3
	Import Verification & Logging	USN-10	As a data manager, I can view transform history and error logs.	Successful, skipped and failed rows are listed	Medium	Sprint-3
Business User		USN-11	As a business user, I can view the imported records in the target table so that I can use the updated data.	I can see all imported records in the target table list	Medium	Sprint-3
