Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	**28 September 2026**
Team ID	6ab221d587602313e82c60c9
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Data Source Creation	Upload spreadsheet through Excel (.xlsx) file Upload spreadsheet through CSV file Create Data Source record in ServiceNow
FR-2	Import Set Loading	Load spreadsheet data into Import Set staging table Preview and verify loaded rows before transformation
FR-3	Transform Map Configuration	Create Transform Map from staging table to target table Field mapping (source field to target field) Coalesce on key field to avoid duplicate records
FR-4	Data Transformation & Import	Run Transform Map to insert / update target records Apply transform scripts for data cleaning (trim, format) Error handling for invalid or missing data
FR-5	Import Verification & Logging	View Import Set Run and Transform History Verify imported records in target table Review error and skipped-row logs

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-functional Requirement	Description
NFR-1	Usability	Simple, guided import process using standard ServiceNow Data Source, Import Set and Transform Map screens, so admins can import data with minimal training.
NFR-2	Security	Only users with admin / import_admin roles can upload files and run transforms; ACLs protect the staging and target tables.
NFR-3	Reliability	Data is imported accurately and consistently; coalesce and error logging prevent duplicate or lost records, and failed rows can be re-run.
NFR-4	Performance	Bulk spreadsheet records are transformed within acceptable time, using scheduled or batched imports for large files.
NFR-5	Availability	Import feature is available whenever the ServiceNow instance is up, with imports runnable on demand or on a schedule.

NFR-6	Scalability	Transform Maps can be reused for larger files and additional data sources or tables without redesign.
