Project Design Phase
Proposed Solution Template

Date	28 September 2026
Team ID	6ab221d587602313e82c60c9
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Organizations receive bulk data (such as employee records) in spreadsheets. Entering it into ServiceNow manually is slow, error-prone and creates duplicate or inconsistent records. There is a need for an automated way to import spreadsheet data accurately into the platform.
2.	Idea / Solution description	Use ServiceNow Data Sources, Import Sets and Transform Maps to import Excel / CSV data. The file is loaded into a staging table, then a Transform Map maps fields, applies coalesce and scripts, and inserts or updates records in the target table. Import logs are used to verify the result.
3.	Novelty / Uniqueness	Uses only built-in ServiceNow features, so no external tools or manual data entry are needed. A reusable Transform Map with coalesce and data-cleaning scripts avoids duplicates and can be re-run for future files.
4.	Social Impact / Customer Satisfaction	Saves time and reduces manual effort and human errors. Data is accurate and up to date, so users get reliable information and faster service, and staff can focus on more valuable work.
5.	Business Model (Revenue Model)	Built on an existing ServiceNow subscription, so there is no extra licence cost. Value comes from reduced labour cost and faster data onboarding. It can be offered as a reusable data-migration / import service to other teams or clients.
6.	Scalability of the Solution	Handles large files through Import Sets, and scheduled imports can automate recurring loads. The same Transform Map approach can be reused for new spreadsheets, additional fields and other target tables.
