Code-Layout, Readability and Reusability

Date	28 September 2026
Team ID	6ab221d587602313e82c60c9
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	Transform map scripts use uniform 4-space indentation.
2	Proper File Structure	Files and folders are logically organized	Yes	Data source, import set table, transform map and scripts are grouped in one update set.
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Names such as source.u_employee_id and target.short_description show their purpose.
4	Function / Method Names	Functions are descriptively named	Yes	Scripts named clearly, e.g. onBefore, validateEmail, getReferenceSysId.
5	Code Comments	Inline and block comments explain logic	Partial	Key transform script logic is commented; simple field maps are not.
6	Modular Design	Code is split into reusable functions/modules	Yes	Field maps and helper functions are separated from the main transform logic.
7	No Redundant Code	Duplicate or unused code is removed	Yes	Unused field maps and test scripts removed after testing.
8	Error Handling	Exceptions and errors are handled gracefully	Yes	Invalid rows are ignored/logged using the ignore flag and gs.log/error messages.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	Spreadsheet Data Source (.xlsx)	ServiceNow Data Source	Any Excel file upload with the same column format	High
2	Import Set (Staging) Table	ServiceNow Import Set	All repeated data loads before transformation	High
3	Transform Map & Field Maps	ServiceNow Transform Map	Reused for each new import into the target table	High
4	onBefore Validation Script	JavaScript	Data cleanup and validation on every import	Medium
5	Coalesce / Reference Lookup Script	JavaScript (GlideRecord)	Updating existing records and mapping reference fields	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	Well organized components with a clear import flow: data source → import set → transform map → target table.
Readability	4	Meaningful names and consistent formatting make scripts easy to follow.
Reusability	4	Data source, import set and transform map can be reused for future spreadsheet imports.
Documentation / Comments	4	Main scripts are commented; more inline comments can be added for field maps.
Overall Score	4 / 5	Project is maintainable and can be extended for other spreadsheet imports.
