Coding & Solution

Date	28 September 2026
Team ID	6ab221d587602313e82c60c9
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab or hosted link here]
Programming Language(s)	JavaScript (ServiceNow server-side scripting)
Framework(s) Used	ServiceNow Platform: Data Source, Import Set, Transform Map
Key Features Implemented	1. Spreadsheet (.xlsx) upload through a Data Source. 2. Import Set staging table to hold raw spreadsheet rows. 3. Transform Map with field mappings to the target table. 4. Coalesce on a unique field to update existing records instead of duplicating. 5. onBefore script for data validation and cleanup. 6. Import logs to verify inserted, updated and ignored records.
Pending / Incomplete Features	1. Scheduled automatic imports. 2. Detailed email notification for failed rows.
Setup / Run Instructions	1. Log in to the ServiceNow instance with admin access. 2. Create a Data Source and attach the spreadsheet (.xlsx) file. 3. Load the data into the Import Set table (Load All Records). 4. Create the Transform Map and map source fields to target fields. 5. Run the Transform and verify records in the target table. 6. Check the Transform History and Import Log for errors.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project imports spreadsheet data into a ServiceNow table using a Data Source, Import Set and Transform Map. Coalesce is used to avoid duplicate records, and invalid rows are handled through validation in the transform script.
