Functional & Performance Testing Template

Model Performance Test

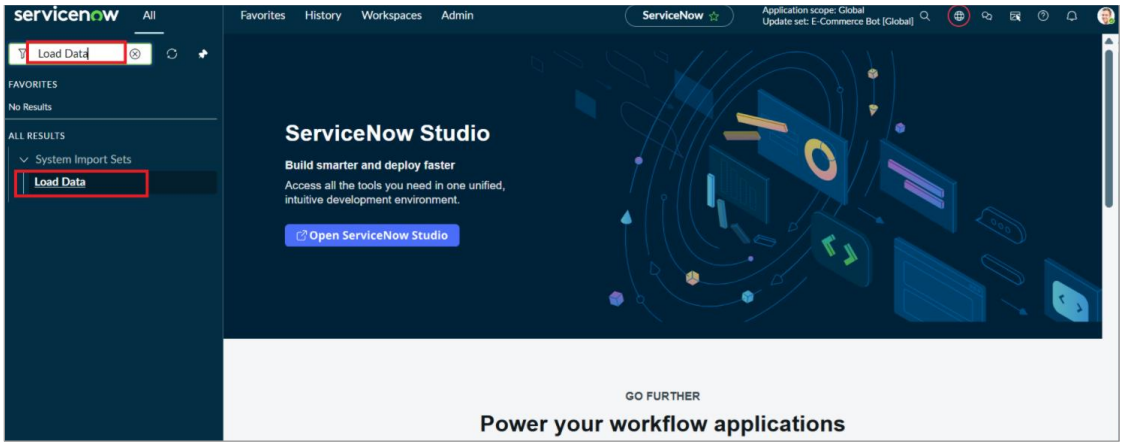

Date	28 September 26
Team ID	6ab221d587602313e82c60c9
Project Name	Project - Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Test Scenarios & Results

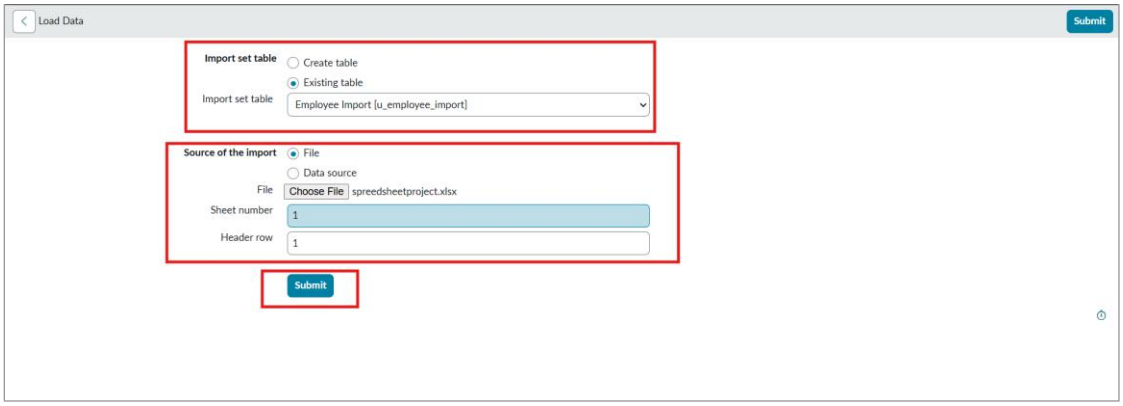

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Spreadsheet File Validation (e.g., .xlsx / .csv, column headers)	Upload a valid file and an invalid file using System Import Sets > Load Data	Valid file loads into the staging table; invalid file shows an error		
FT-02	Field Mapping Validation (e.g., name, email, department)	Open the Transform Map, map source fields to target fields and run the transform	Values are stored in the correct target table fields		
FT-03	Data Transformation (e.g., employee records)	Click Transform on the import set and open the target table	Records are created correctly based on the mapping		
FT-04	Coalesce / Duplicate Check	Import the same rows again with a coalesce field (e.g., Email) set	Existing records are updated, no duplicates created		
PT-01	Import Time Test	Note the start and end time of the transform in Transform History	Should complete within acceptable time (e.g., under 1 minute)		
PT-02	Bulk Data Load Test (e.g., 500+ rows)	Upload a spreadsheet with a large number of rows and run the transform	Should load smoothly without errors or slowing down		
PT-03	Multiple File Upload Test (e.g., 2-3 spreadsheets)	Upload and transform multiple spreadsheets one after another	Should work smoothly without crashing		

Test Evidence – Screenshots

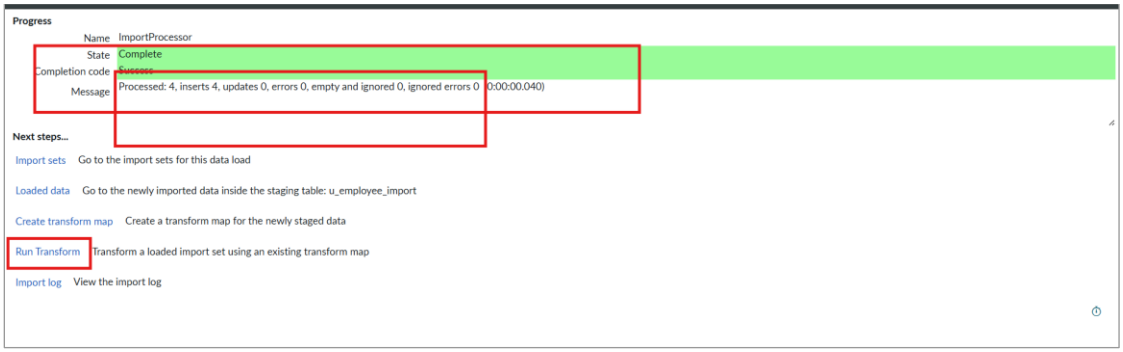

FT-01 – Spreadsheet File Validation

Application Navigator → System Import Sets → Load Data

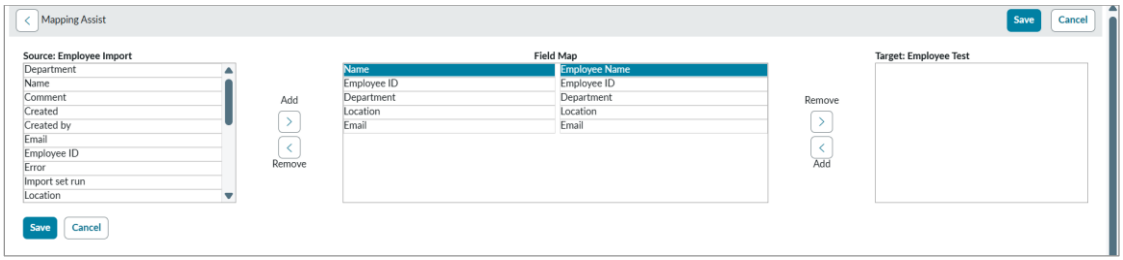

Load Data form: existing table Employee Import, file spreadsheetproject.xlsx, sheet 1, header row 1

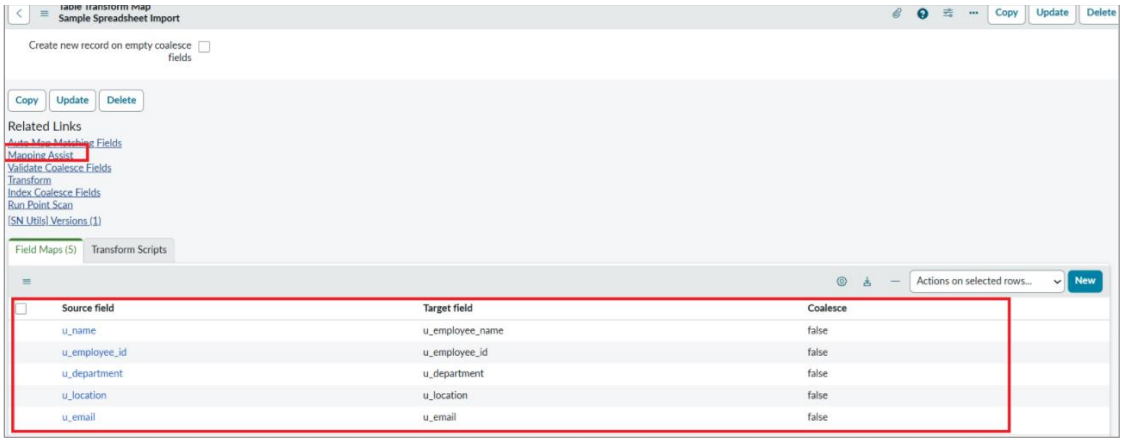

Valid file loaded into staging table: State Complete – Processed 4, errors 0

Note: invalid-file (negative) test screenshot is not available in the project document.

FT-02 – Field Mapping Validation

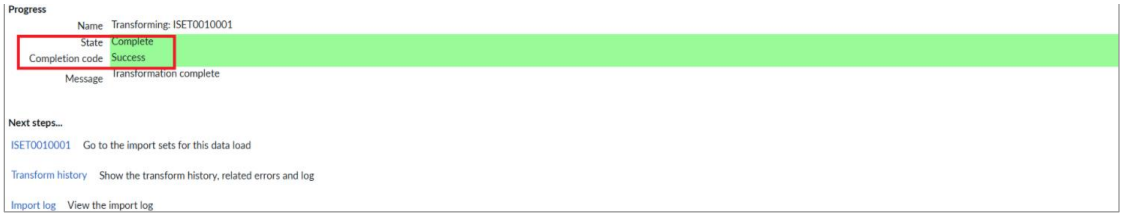

Mapping Assist: source fields mapped to target fields

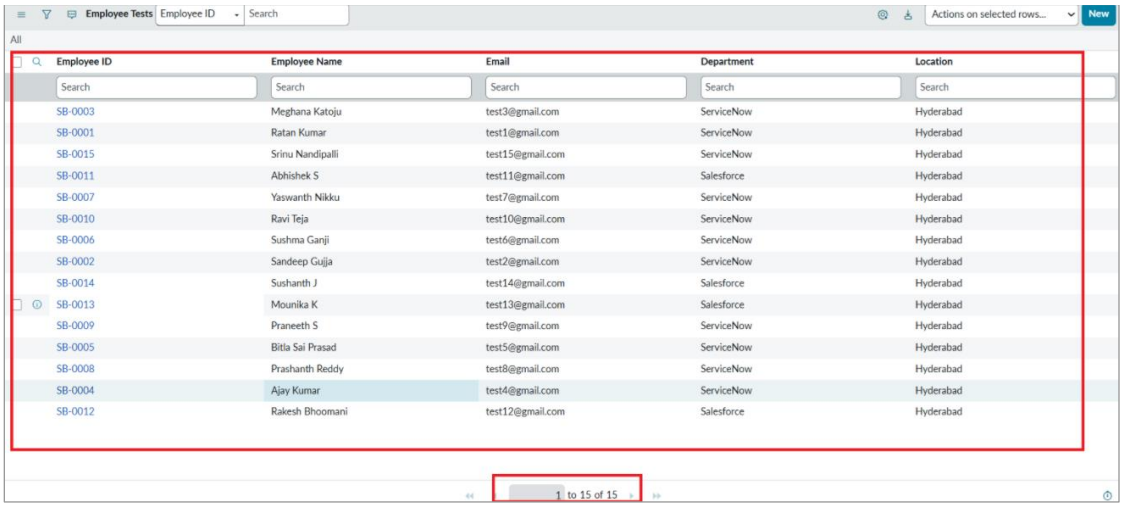

Field Maps: u_name, u_employee_id, u_department, u_location, u_email mapped to Employee Test fields

FT-03 – Data Transformation

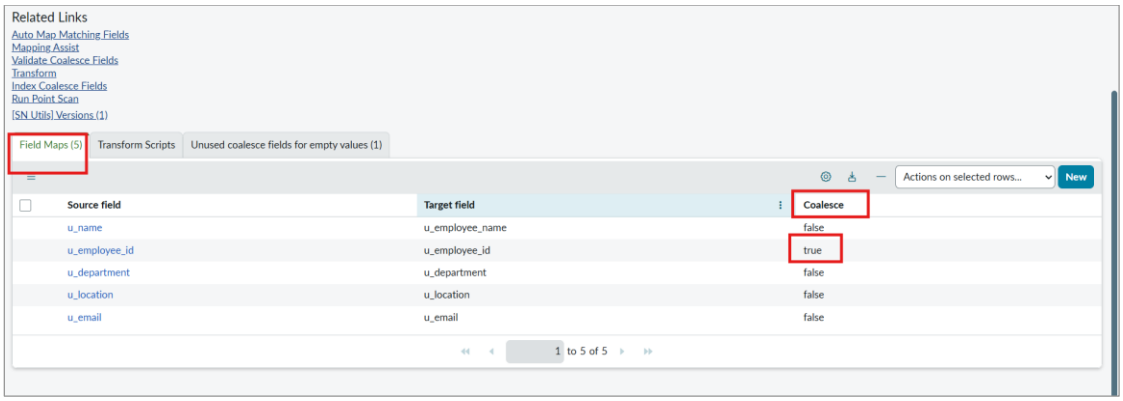

Transform completed: State Complete, Completion code Success

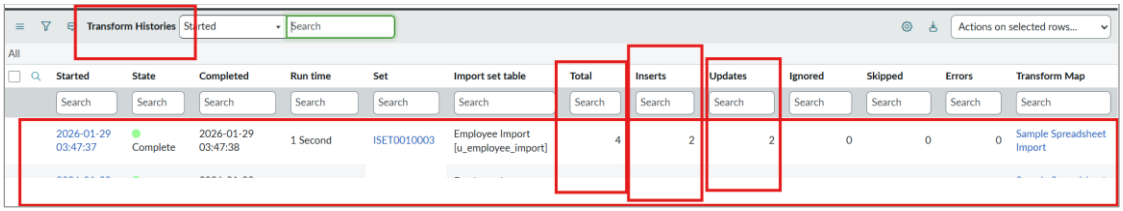

Records created in the Employee Test target table

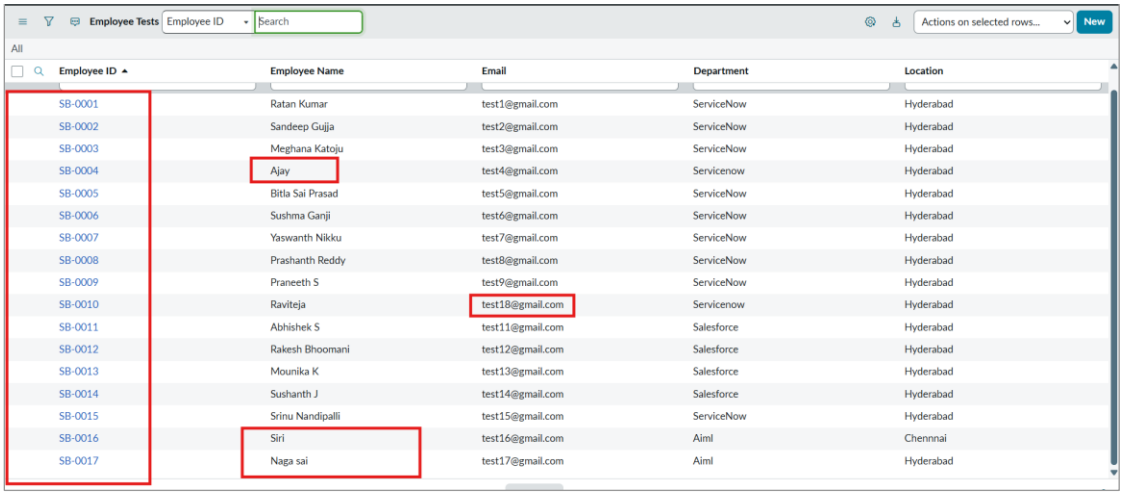

FT-04 – Coalesce / Duplicate Check

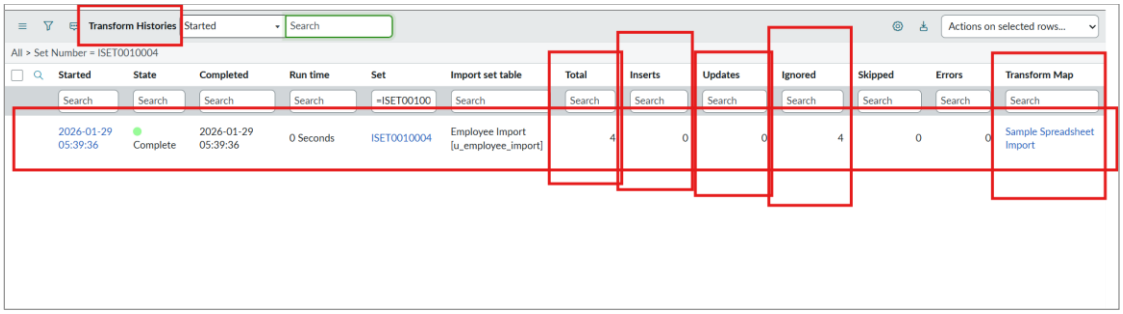

Coalesce set to true on Employee ID field map

Transform History: Total 4, Inserts 2, Updates 2 (no duplicates)

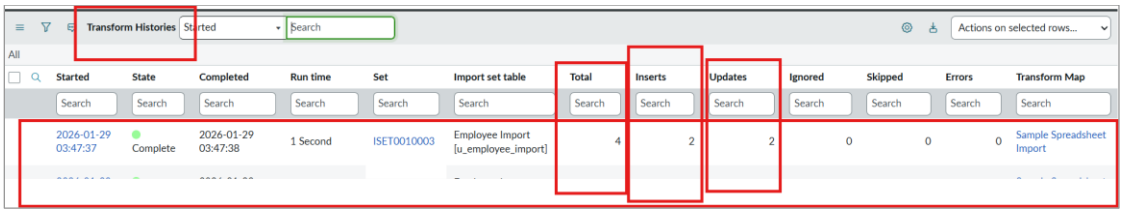

Employee Test table: existing rows updated, new rows inserted

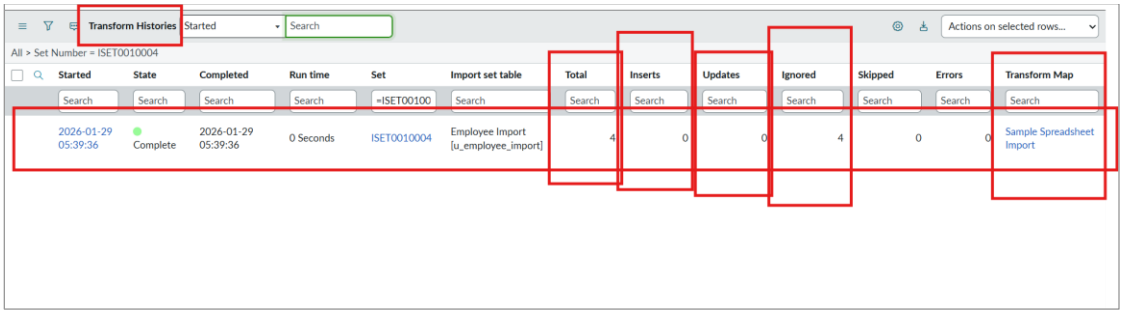

Same sheet re-imported: Inserts 0, Updates 0, Ignored 4

PT-01 – Import Time Test

Transform History – Run time: 1 Second

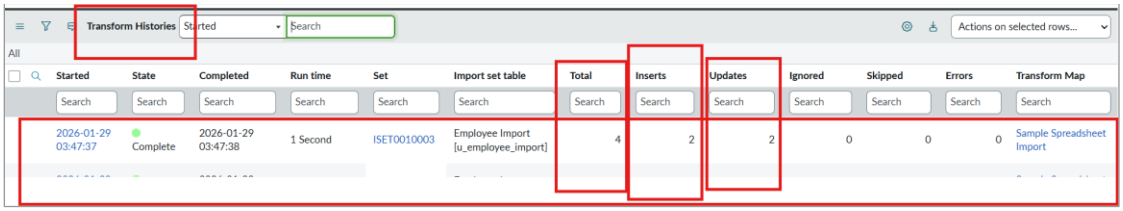

Transform History – Run time: 0 Seconds

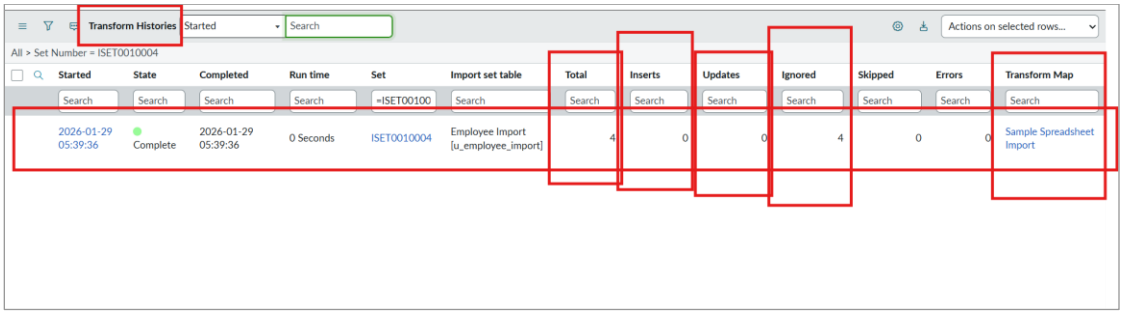

PT-02 – Bulk Data Load Test (500+ rows)

No matching screenshot in the project document (only 4–17 rows were loaded). A 500+ row test still needs to be run and captured.

PT-03 – Multiple File Upload Test

First upload transformed (ISET0010003) – Complete, no errors

Second upload transformed (ISET0010004) – Complete, no errors

Note: the second upload reused the same spreadsheet, not a different file.
