Project Executable Files

Date	28 September 2026
Team ID	6ab221d587602313e82c60c9
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

/Import_Data_using_Transform_Maps

/data - Sample Spreadsheet.xlsx (source employee data) and the updated spreadsheet used for the coalesce test

/servicenow-config - Employee Test table (u_employee_test), Employee Import table (u_employee_import), Data Source and Transform Map (Sample Spreadsheet Import)

/reports - Employees by Department, Employees by Location and other reports on the Employee Test table

/testing - Transform History screenshots and Performance Testing document

/docs - Project documentation (Import_Data_using_Transform_Maps.docx)

README - Setup and run instructions (see Step 4)

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	[Paste your ServiceNow instance URL here, e.g. https://devXXXXX.service-now.com]
Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	ServiceNow (Personal Developer Instance, cloud hosted)
Repository Link	[Paste your GitHub / GitLab link here]
Demo Video Link	[Paste your demo video link here, if required]

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally.

Pre-requisites:

A ServiceNow instance (Personal Developer Instance) with admin role, and the spreadsheet (.xlsx) file with columns Employee ID, Employee Name, Email, Department and Location.

Step 1: Log in to the ServiceNow instance as admin.

Step 2: Create the custom table Employee Test (u_employee_test) with the required fields.

Step 3: Go to System Import Sets > Load Data, upload the .xlsx file and create the import table Employee Import (u_employee_import).

Step 4: Click Create Transform Map, name it Sample Spreadsheet Import, set the target table to Employee Test and map the fields using Mapping Assist.

Step 5: Click Transform and confirm the completion code is Success.

Step 6: Open the Employee Test table to verify the imported records, and check Transform History for inserted, updated and ignored counts.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Scheduled (automatic) import is not implemented	Import is run manually using Load Data; can be added with a Scheduled Import
2	Duplicate handling depends on the Coalesce field being set	Enable Coalesce on the unique field (Employee ID) in the Field Maps
3	Spreadsheet column headers must match the mapped fields	Re-run Mapping Assist if the column names or order are changed
